

4103C, 4103M

MODELS

- **Continuous Pen Recording**
1, 2, 3 or 4 Pens
- **Multi-point Recording**
Providing 6 Colour traces
- **High Visibility Display**
 **4103** – Numeric and bargraph indication
- **Isolated Universal Inputs**
Select from mA, mV, V, Thermocouples and RTD
- **Annotation**
Clear text printing of time/date and custom messages
- **Data Archiving Facility**
Store data on an integral PCMCIA card
- **Powerful Maths Pack**
Calculate relative humidity, Fo value and more
- **Communications**
Modbus, RS232 or RS485
Modem support for remote file transfer

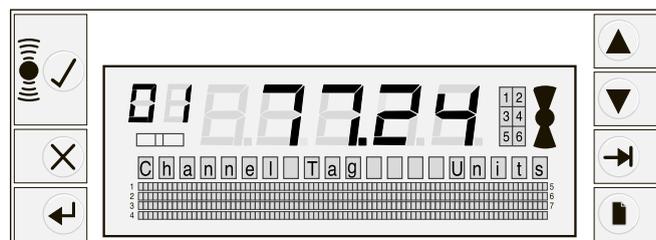

100mm Recorders Specification Sheet

The 4103 is a high specification, 100mm strip chart recorder, providing continuous recording for up to 6 Process Variables. Information such as Channel descriptor, alarm set point and scale information can be viewed on a high resolution VFD display. Process variables including messages can be archived to an optional removeable media. These units can be programmed on site via the user interface or a configuration file can be transferred using a PCMCIA card.

Display

As well as displaying the process variables as a numeric value the 4103 provides bargraph indication. The display will cycle through PV's configured to appear in the Display group. Additional information including the channel descriptor, scale information and alarm set points can be viewed using the operator key.

Configuration

In order to prevent unauthorised access the configuration is password protected. Entry of the password provides access to the instrument configuration pages. It is possible to provide the operator access to certain parameters, for example you may require the operator to be able to change the chart speed or archiving interval. These fields can be enabled in the operator access menu.

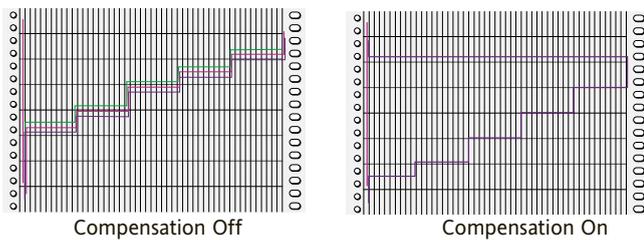

Operation

Adaptive Recording - Multi-point version

At slow chart speeds it is possible that the input circuit, between chart increments will pick up a spike or other brief disturbance in the measured signal, but that this disturbance will not appear on the chart, even though they may trigger an alarm. With adaptive recording enabled, if a sudden change in the input signal is detected, the recorder will place an additional dot on the chart without the chart being moved. This means that even at the lowest chart speed, unexpected signal changes can still be traced.

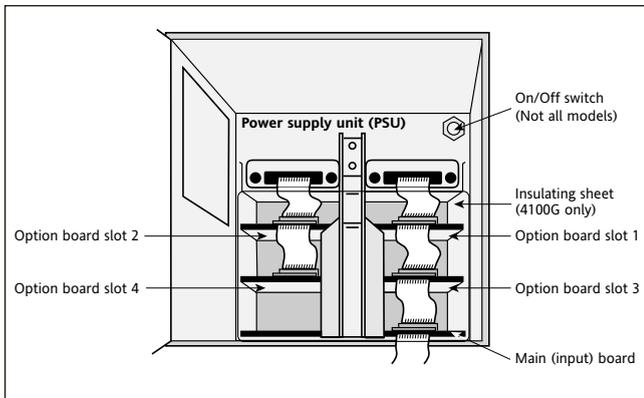

Pen offset compensation - Continuous Pen version

For continuous trace recorders the traces are separated in the time axis of the chart by 2mm, this results in simultaneous events being separated on the chart by 2mm. When enabled on the 4103C, Pen offset compensation applies a delay to the pens, the time delay being determined by the selected chart speed, such that simultaneous events appear on the same time axis.

Modular Design - All

The modular design of the 4100 Series allows for upgrades to be carried out in situ thus reducing downtime.

Exploded view

Data Archiving

Two log groups are available for sending tabular data to the chart or PCMCIA card. Either log groups can be initiated to print on the chart. Log group 2 can also be archived to a PC Card automatically at predetermined intervals. Data can be archived as either ASCII for use in spreadsheet, or Packed for viewing using Eurotherm Review software.

Maths Pack

The addition of the advanced maths pack option provides the 4103 with 16 derived channels and the ability to carry out complex calculations such as relative humidity and mass flow. Derived channels can be added to the log and display groups for trending and archiving as required.

Communications

Supporting either RS232 or RS485 the Serial Communications board provides the means of establishing a link between a recorder and a host computer (using the Gould Modicon MODBUS protocol), terminal emulator or Modem.

Analogue Output

If required, an input signal or the resulting calculation from a maths channel, can be retransmitted via an analogue output, to another device. Up to four analogue outputs can be fitted, each capable of generating a voltage or current output.

Events

As standard, there are six internal events, each can be triggered by up to two selected input sources. The number of events rises to 16 when the Event Input board is fitted. Input sources can be logically ANDed or ORed allowing the use of multiple inputs. An example of the event input would be to provide external chart or logging control.

Custom Curve

This option allows the user to enter a Non standard linearisation table. The curve is entered as pairs of points (input (X), display (Y)), up to a maximum of 32 pairs.

Review Package

Offline printing and viewing is made possible by the use of the Review Software package.

This package uses the packed data files from the recorders local storage media and imports them into a PC database. Data from one or more archive files can easily be viewed. This data can then be printed or exported as a CSV file. Review can also be configured to automatically Backup and Transfer the archived files via a modem.

TECHNICAL SPECIFICATION

Input Board

General

Input types		dc Volts, dc millivolts, dc milliamps (with shunt), Thermocouple, 2 / 3-wire RTD Contact closure (not ch 1) >60ms User configurable
Input type mix		
Max no of inputs	4103C 4103M	4 6
Input ranges		-8 to +38mV; -30 to +150mV; -0.2 to +1 Volt; -2 to +10 Volts -20 to +100 Volts with attenuator
Termination		Edge connector / terminal block
Noise rejection (48 to 62 Hz)		Common mode: >140dB (channel to channel and channel to ground). Series mode: >60dB.
Maximum common mode voltage		250 Volts continuous
Maximum series mode voltage		45 mV at lowest range; 12 Volts peak at highest range.
Isolation (dc to 65 Hz; EN61010)		Installation cat. II; Pollution deg. 2
Channel to channel:		300V RMS or dc (double insulation)
Channel to common electronics:		300V RMS or dc (double insulation)
Channel to ground:		300V RMS or dc (basic insulation)
Dielectric strength (BS EN61010)		(1 minute type tests.)
Channel to channel:		2300 Vac
Channel to ground:		1350 Vac
Insulation resistance		>10MΩ at 500V dc
Input impedance		38mV, 150mV and 1V ranges: >10MΩ; 10V range: 68.8kΩ
Over voltage protection		50 Volts peak (150V with attenuator)
Open circuit detection		±57nA max.
Recognition time		250 msec
Minimum break resistance		10MΩ

DC Input ranges

Shunt/attenuator	Externally mounted resistor modules
Additional error due to shunt	0.1% of input
Additional error due to attenuator	0.2% of input
Performance	See table 1

Low Range	High Range	Resolution	Maximum error (Instrument at 20°C)	Worst case temperature performance
-8mV	38mV	1.4μV	0.085% input + 0.073% range	80ppm of input per °C
-30mV	150mV	5.5μV	0.084% input + 0.053% range	80ppm of input per °C
-0.2V	1V	37μV	0.084% input + 0.037% range	80ppm of input per °C
-2V	10V	370μV	0.275% input + 0.040% range	272ppm of input per °C
